

Abdulqadir Abuharrus

Junior Software Developer

abdu@aabuharrus.dev | aabuharrus.dev | github.com/Abdo-Abuharrus211 | linkedin.com/in/aabuharrus/

Skills

- **Programming Languages:** Python, JavaScript/TypeScript, Java, C, C++, C#, Go, Rust, Elixir, PowerShell, and OCaml
- **Web:** HTML, CSS, React, Redux, Next.js, Flask, Astro, Node.js, Express.js, Phoenix
- **Databases:** MySQL, MS SQL Server, PostgreSQL, MongoDB, and Redis
- **Dev Tools:** Docker, Expo, Git, Azure DevOps, and Supabase

Experience

Jr. System Analyst, Provincial Health Services Authority Oct 2025 – Present

- Engineered and built a reporting system using .NET (C#) and PowerShell scripts to streamline test automation, which saved 10+ hours of manual validation per week
- Visualized task completion data by setting up Microsoft Fabric pipelines and configured a Power BI dashboard for management to review performance metrics

Mobile App Developer (practicum), Impulse Studios Jan 2025 – Apr 2025

- Implemented 15 user stories and 25 features that adapted the client's business goals by following Agile development methods to build a mobile app for a Moto-sport publication
- Translated UI designs by building modular, cross-platform React Native components for both Android and iOS using TypeScript and Expo
- Repaired critical issues related to the app's navigation system, advancing the app to the next stage of development, which lead to developing 11 API request functions

System Analyst Co-op, Provincial Health Services Authority Jan 2024 – Sept 2024

- Measurably increased team efficiency by 7% by creating 13 internal tools that streamlined workflows related to generating reports to managing databases for BC Cancer's information systems
- Improved document processing by building a program to update reports with critical information and integrating it into a larger document management system used by PDHIS

Projects

Coopy github.com/Abdo-Abuharrus211/coopy

- Optimized blog workflows by building a CLI tool in Rust that seamlessly syncs with Obsidian vaults
- Reduced redundant checks by scanning metadata in the Markdown tags, parsing configuration files, and command-line arguments, resulting in faster run times

ClickClack click-clack.app

- Co-developed a typing-speed micro-service app, that leverages Gemini to a story based on a theme and challenge the user to type before a timer runs out, then metrics such as words per minute
- Built with a Next.js frontend, Gemini AI, a PostgreSQL database, and an Express.js API
- Developed several business logic API endpoints, user authentication using JWT, and built frontend components and pages, including the admin dashboard and Scoreboard.

Project Vitalis

github.com/Abdo-Abuharrus211/Project-Vitalis

- Monitored system performance by developing a multi-threaded tool using Go, to monitor system stats including memory usage, CPU and GPU temperature and utilization, OS details, and hardware components
- Visualized the data by rendering a Terminal UI using the Bubble Tea library which features many UI elements and animations, providing a clean and intuitive user interface that's easy to understand

AudioReaper

audioreaper.aabuharrus.dev/

- Synchronized music libraries with Spotify accounts by building an AI-powered Full Stack web app
- Improved metadata extraction by 24% across 1020 test samples using GPT-4 from inconsistent file names when metadata tags missing
- Built a Flask (Python) backend server for metadata processing, API requests to Spotify, and user authentication and session management, and a Node.js (JavaScript) client app

Education

British Columbia Institute of Technology – Computer Systems Technology Diploma

May 2025

University of British Columbia – 47 credits towards Bachelor of Science

Sept 2020 – Sept 2022

Recipient of the Outstanding International Student Award
